1. (C-SS) Statistics: Viewer: 018  
Session date: 16 MAY 88  
Start time: 1306  
End time: 1356  
Mode of operation: SOLO  
PI: Cold  
AV: Material from 8807

2. (C-SS) Cuing: Access in present time and describe the contents, use and functions of areas "A" and "B" of a structure at encrypted coordinates 112301/767476.

3. (C-SS) Results:

a. AREA A: Area "A" was perceived as:

- 1) a long, tall; cold and mainly empty area
- 2) The floor is white, but gives a strange appearance of not being at a definite level (AOL: as though there were a cloud or haze sitting on the floor).
- 3) There were several perceptions of some (AOL: "plate" or "hatch lid") which had some kind of crisscrossed "straps" on it (see sketches, pages 2 and 3).
- 4) There were a few people either standing in a group, or just walking through. For the most part, area "A" seemed like more of a passageway for most of the people than a workplace or a place to stay. One person appeared to be wearing very heavy protective clothing which seemed to be reflective.

- 5) The room appeared to be mostly empty, except for some "junk" or things lying around on the floor, out of everyone's pathway. These "things" seemed to be covered with a layer of (AOL: dust or frost).

b. AREA B: Area "B" was perceived as:

- 1) A very large, tall, "funny-shaped" area or junction of areas (see drawing, inclosed, and drawing on page 8 of the transcript).
- 2) While it is tidy, in that there is not a lot of "junk" and things lying around, it is not clean (much as one might describe a very well-kept garage: neat but dirty).
- 3) There was a vague impression that it was a workplace, of sorts, and of the general size one would need for working on either military tanks, or railroad train cars.
